

TheraVine™ strikes gold in the fight against ageing

Every minute of every day our bodies and skin cells are being bombarded by little destructive forces called free radicals, causing premature ageing and a variety of potential diseases.

Free radicals are extremely harmful to the skin and can cause severe damage to the DNA and protein structures (such as collagen and elastin), they decrease the repair ability of DNA, they influence enzyme activity, and they inhibit normal cellular function.

How does one protect DNA while fighting the destructive action of free radicals?

Enter TheraVine™'s UltraVine™ Advance Range, an array of advanced products based on extensive research and clinical testing using the latest technological claim ingredients resulting in anti-oxidants with optimal anti-ageing benefits. Because the UltraVine™ Advance Range is high in ground-breaking antioxidants, it immediately becomes a must-have for anyone intent on combating the ageing process as it is crucial in the prevention of cellular damage.

The UltraVine™ Advance Range includes cutting edge products achieving superior results, that is, the UltraVine™ Advance RCS Day Cream, the UltraVine™ Advance ROS Night Cream, and the UltraVine™ Advance RNS Concentrate. In 2013, the UltraVine™ Advance Rejuvenating Gold Collagen Film joined the iconic range by further revolutionising the fight against ageing – a synergy of next generation actives infused in a unique plant-sourced collagen film to help brighten the skin's complexion, lock-in moisture and fight the signs of ageing. The addition of pure, soft 24K Gold and sparkling Diamond Dust further enhance the effects of the supercharged actives leaving the skin moisturised and glowing with illumination. The UltraVine™ Advance Cellular Gold Facial effectively combines cosmeceutical science with the luxury of a spa experience, providing clients with time to relax while, at the same time, delivering younger looking skin with a radiating golden glow.

ULTRAVINE™ ADVANCE CELLULAR GOLD FACIAL (90 min)

The following results were obtained after 1 treatment with a volunteer 60 years of age:

The latest addition to this ground breaking range is the UltraVine™ Advance Contouring Retinol Eye Pads. With a perfect synergy of all the 'must have' actives infused in an easy to use super active serum base, these eye pads form a protective membrane that effectively helps actives to penetrate deeper into the skin allowing it to address and fight the signs of ageing.

The powerful technological action of Vitamin A intensely moisturises while promoting the production of Hyaluronic Acid and in doing so, helps to improve wrinkles and assists in preventing ageing. Not only is Vitamin A a potent anti-oxidant, it stimulates cell growth and in doing so helps to thicken the epidermis while improving the elasticity of the skin.

Containing the highest concentrations of ingredients, the UltraVine™ Advance Contouring Retinol Eye Pads will help to smooth away lines and wrinkles, create a fresh and radiant looking eye contour and visibly turn back time. All with no effort whatsoever and practically in the blink of an eye.

Designed for mature, dehydrated or environmentally stressed skins, the UltraVine™ Advance range will leave skin better protected, smoother and with expression lines and wrinkles substantially less visible. Try it, your most radiant skin awaits you.

TheraVine™ – South Africa's sensory gift to scientific skin care.
